

IKON Certified Series™ Replacement Cartridges

1,000 Years? Or a few minutes...You decide

RECYCLING FACTS

- The plastic used in a typical laser cartridge takes approximately ten centuries — or 1,000 years — to decompose.
- Recycling your empty laser cartridge instead of throwing it away only takes a few minutes

Every year, millions of pounds of plastic are thrown into our nation's landfills, taking up valuable space and wasting priceless resources. IKON is committed to helping preserve our planet's natural resources and you can help.

It's free-and it's easy with IKON.

HERE'S HOW:

1. Place your empty laser toner into the box your new laser cartridge came in. Reuse the foil bag and/or packing inserts if available to help protect the product during shipment.
2. Place the empty laser in a centralized collection area or give to your office products driver on the next delivery. Make sure all your company's employees know the location specified.
3. Empty laser cartridges will be returned to the recycling center, where they will be remanufactured into a premium quality replacement cartridge.

Don't forget — The IKON Certified Series replacement laser cartridges can help you save money and help the environment without sacrificing quality. Ask your sales person for details.
